Access to digital services

By Franziska Meng

The digital services are available to all HNE members at all times. Anyone who wants to access them outside the HNE must have the VPN connection activated. Instructions for the setup can be found on the ITSZ website otherwise you can watch the linked YT-Video. In addition to the databases, the HNE now has access to the journals of the publishers Wiley & Springer. The individual digital services are available at the following link.

The digital services:

Databases for the areas:
- Business Sciences
- applied natural sciences
- Energy & Environmental Protection
- Statistics

E-Books
E-Journals
The publication server OPUS, which has been managed by the university library for some months now, offers all university members the possibility to publish publications with scientific content such as journal articles, monographs, studies or research reports in digitized form. Publications that are published on behalf of the HNE Eberswalde (collective works, electronic journals, conference reports, publication series, etc.) can also be made accessible to a broader public, as they are displayed in local, regional and national library catalogs, search engines and OAI service providers.

In addition, the long-term archiving of these documents is guaranteed. If you want to publish a document, please use the online help for the publication process under the FAQ section on the OPUS homepage (https://opus4.kobv.de/opus4-hnee/home) or contact me directly at the given address of the contact person in the university library.

Opening hours of the University Library

Due to the pandemic, the University Library will be open on a limited basis Monday to Friday from 2-6 pm until further notice.
Up-to-date information can be found on our website.
Beginning with the summer semester, research consultations will be held on Mondays from 10 - 11 am and Thursdays from 5 - 6 pm. While access to the University Library is limited, this will take place online at BigBlueButton.

Video Tutorials

InfoFit offers more and more video tutorials. These deal with various topics and provide support for research, the use of different services and much more. The YouTube channel can be found at https://www.youtube.com/channel/UCYkeM-u4xCbWX9nGuIHde2A
Finally it is possible to use Citavi with MacOS and Linux operating systems. At the moment it is still a beta test version, but anyone who is interested can test it under the following link https://help.citavi.com/knowledge-base/article/citavi-web-beta-testen.

More information can be found at https://www.citavi.com/de/citavi-web-beta.

MAXQDA licensed

MAXQDA is a software of the company VERBI for computer-aided qualitative data and text analysis. As a member of HNE you have full access from now on. For the installation the VPN must be active. More information will be available soon on the ITSZ website.
